

Daawaynta Monoclonal Antibody

(Ku Daaweynta Unugyada Difaaca Monoclonal) ee COVID-19

Waa maxay? Daawaynta Monoclonal Antibody (ku daaweynta unugyada difaaca monoclonal) (mAb) waxay xoojisaa habka difaacaaga si ay kaaga caawiso la dagaalanka caabuqa COVID-19 oo ay weheliso unugyada difaaca dabiiciga ah. Waxay ka caawisaa ka hortagga cudurada daran iyo dhimashada. Tallaaladu wali waa habka ugu waxtarka badan ee looga hortago ama si weyn loogu yareeyo xanuunka uu keeno caabuqa COVID-19, laakiin daawaynta mAb ayaa laga yaabaa inay caawiso haddii qofka dhawaan laga helay COVID-19.

aniga ma i caawin kartaa? Daawaynta waxaa loogu talagalay dadka sida ugu waxtarka badan uga faa'iideysan doona. Waxaa laga yaabaa inaad u qalanto daaweynta difaaca ee monoclonal haddii lagaa helo caabuqa COVID-19 oo aad halis sare ugu jirto in uu ku haleelo xanuun daran, aad ka weyn tahay 12 sano jir, **waxaana ka soo wareegay 10 maalmood ama ka yar tan iyo markii ay calaamadahaagu bilowdeen**. Booqo coronavirus.utah.gov/noveltherapeutics oo guji **Risk Score Calculator (Xisaabiyaha Dhibcaha Khatarta)** si aad u ogaato in daawayntani ay ku caawin karto iyo in kale.

Goorma ayaan qaadanayaa? Daawayntani waxay wextar badan leedahay marka goor hore la qaato. waxaana fiican in wakhti hore la qaato. Waa in lagu bixiyaa 10 maalmood gudahooda tan iyo markii ay calaamadaha xanuunku bilaabmeen. **Ogow khatarta ka hor inta aanad qaadin caabuqa COVID-19, oo isticmaal Risk Score Calculator (Xisaabiyaha Dhibcaha Khatarta)** si aad u aragto haddii daawayntani ay ku caawin karto (**waxaad ka helaysaa coronavirus.utah.gov/noveltherapeutics**) oo isla markaaba iska baadh COVID-19. Hadii lagaa helo caabuqa COVID-19, markaba arintan samee.

Sidee loo bixiyaa? Inta badan daawada waxaa lagugu siinayaa faleebada xididada laga qaato (IV) ama cirbad gacantaada lagaa muday. Waxay daawayntu qaadanaysaa ilaa laba saacadood. Bixiyeyaal daryeel caafimaad oo tababaraa oo kaliya ayaa bixin kara daaweynta.

Amaan ma tahay? Haa Daawooinka mAb waxaa ansixiyay Maamulka Dawooinka ee Federaalka (FDA) oo wata Ogolaanshaha Iisticmaalka Degdegga ah (EUA), waxaana lagu muujiyay tijaabooyinka caafimaad si ay badbaado iyo wextar u leeyihiin. Dhibaatooyinka soo raaca waxaa ka mid ah: xanuun, dhiig-bax ama nabar meesha irbaddu ka gasho gacantaada, lallabbo/shuban, madax-xanuun, dawkhaad, ama maqaarka cuncuna.

Halkee ayaan ka helayaa? Marka lagu daro rugo caafimaad oo badan oo bixiya daawaynta mAb (taasoo laga yaabo inay lacag ka qaadaan), waxaa jira afar goobood oo ay dawladu maamusho ama shuraako ah oo aad ku heli karto daawaynta lacag la'aan. Goobahani waxay ku yaalaan Degmada Davis, Murray, Orem iyo St. George. University of Utah Health and Intermountain Healthcare (Jaamacadha Caafimaadka ee Utah iyo Goobaha Daryeelka Caafimaadka ee Intermountain) sidoo kale wax kharash ah kuma laha bukaanka. Daawaynta carruurta da'doodu tahay 12-15 sano fariin iimayl ah u dir Pediatric.MonoclonalAntibodies@imail.org

Macluumaad dheeraad ah oo ku saabsan mawduucan iyo wax ka sii badan.
